Education

NBN Sinhgad School of Engineering, Pune

2022 – 2026

Bachelor of Engineering in Information Technology | Savitribai Phule Pune University | CGPA:

7.68/10

Experience

Zeta-V Technology Solutions Ltd.

Jan 2026 – Jun 2026

Software Engineering Intern

- Built **Python-based data processing workflows** to extract, clean and validate 500+ records across GA4, Google Search Console and LinkedIn datasets with inconsistent schemas and file formats.
- Developed **Python and Playwright automation pipelines** for structured and semi-structured data extraction and multi-step task execution.
- Worked on **data quality checks, validation and workflow automation** to improve the reliability and consistency of business data.
- Completed Salesforce Administrator training (**34,000 Trailhead points, 4 Superbadges, 34 badges**) and built an **HR Operations & Recruitment Platform** using Salesforce Sales Cloud with custom objects, reports, dashboards, validation rules and access controls.
- Prepared functional specifications, feasibility reports and technical roadmap documentation while coordinating with technical and business stakeholders.

Code4Bots Pvt. Ltd.

Feb 2025 – Apr 2025

AI Research Intern

- Researched AI adoption opportunities for companies such as Zomato and Zerodha, identifying business processes suitable for AI-driven automation and designing workflow architectures for enterprise use cases.
- Analyzed business requirements and translated them into technology-focused AI solutions, presenting findings through a **100-slide research presentation**.

Projects

Parchify – AI-Powered Invoice Processing Platform

Final Year Capstone | Team Lead

- Built **Parchify**, a web application that processes unstructured invoices and converts them into structured, validated data using **Google Document AI, OCR, canonical schema modeling and automated financial validation**, achieving **94.3% OCR accuracy, 91.2% field-extraction F1-score and 88.5% automated validation**, reducing manual review to **11.5%**.
- Designed a **canonical data model** to normalize invoice information across heterogeneous vendor formats, enabling consistent downstream processing and structured exports in **Excel, JSON and PDF**.
- Automated the end-to-end data processing workflow with email-based invoice fetching and pre-validation checks for blank fields, tax calculations and mismatched totals using a **SQLite relational data model** with **Python/FastAPI, React.js and Tailwind CSS**.

PDF-based RAG (Retrieval-Augmented Generation) Q&A System

Personal Project | In Progress

- Building a locally-hosted **RAG data pipeline** for unstructured PDF documents covering document ingestion, text chunking, embedding generation, vector storage and semantic retrieval using **PyMuPDF, Sentence Transformers and ChromaDB**, with local LLM-based answer generation through Qwen3 and Ollama.
- Implemented document-grounded retrieval that restricts generated answers to retrieved source context and provides **source and page-level citations**.
- Extending the system with **multi-PDF ingestion, semantic chunking, retrieval evaluation and Streamlit-based interaction**.

HR Operations & Recruitment Platform

Salesforce Sales Cloud

- Built an HR and recruitment management application enabling HR teams to **schedule interviews, manage candidate information and track internal activities** through custom objects and employee-focused page layouts.
- Designed **dashboards, automated reminders and expense reports**, along with validation rules and role-based access controls, to maintain consistent HR data and provide leadership with visibility into recruitment and employee operations.

Publication

“Vendor-Agnostic Invoice Processing Framework Integrating OCR, Canonical Modeling, and Human-in-the-Loop Validation” — International Journal of Computer Applications (IJCA), Foundation of Computer Science (FCS), Delaware, USA, 2026.

Co-authored a research paper formalizing the invoice-processing framework built as part of **Parchify**, covering OCR-based extraction, canonical data modeling for cross-vendor invoice formats, automated financial validation and human-in-the-loop review for low-confidence fields.

Skills

Programming & Data:	Python, SQL, Java, JavaScript, Pandas, NumPy, Data Analysis, Data Processing, Data Validation, OpenPyXL
Data Engineering:	ETL/ELT Concepts, Data Transformation, Data Pipelines, Data Quality, Canonical Data Modeling, Schema Design, Workflow Automation
Cloud & AI:	Microsoft Azure, Oracle Cloud Infrastructure, Google Document AI, Cloud Fundamentals, Machine Learning, OCR, Generative AI, Retrieval-Augmented Generation (RAG), ChromaDB
Development:	FastAPI, React.js, Node.js, HTML5, CSS3, Tailwind CSS, Playwright, Streamlit
Databases & Tools:	SQLite, Git, GitHub, VS Code, Microsoft Excel
Enterprise & Collaboration:	Salesforce Sales Cloud, Technical Documentation, Process Improvement, Problem Solving, Teamwork, Cross-functional Collaboration, Stakeholder Communication

Certifications

- **Microsoft Azure Fundamentals (AZ-900)** – Score: 985/1000
- **The AI Engineer Course 2026: Complete AI Engineer Bootcamp** – Udemy, 2026
