Education

NBN Sinhgad School of Engineering, Pune

2022 – 2026

Bachelor of Engineering in Information Technology | Savitribai Phule Pune University | CGPA:

7.68/10

Experience

Zeta-V Technology Solutions Ltd.

Jan 2026 – Jun 2026

Software Engineering Intern

- Completed Salesforce Administrator training (**34,000 Trailhead points, 4 Superbadges, 34 badges**) and built an **HR Operations & Recruitment Platform** on Salesforce Sales Cloud using custom objects, reports, dashboards, validation rules and access settings (*concepts directly transferable to ServiceNow ACLs, Business Rules and Update Sets*).
- Built **automation pipelines** using Python and Playwright for structured data extraction and multi-step task execution, applicable to workflow automation and scripted business logic. Prepared project planning presentations to align technical scope with delivery timelines for stakeholders.

Code4Bots Pvt. Ltd.

Feb 2025 – Apr 2025

AI Research Intern

- Researched AI adoption opportunities for companies such as Zomato and Zerodha, producing case studies to identify high-impact automation areas, and designed the core workflow architecture and demo for a client-tailored enterprise AI system, presenting findings via a **100-slide research presentation**.

Projects

Parchify – AI-Powered Invoice Processing Platform

Final Year Capstone | Team Lead

- Built **Parchify**, an online web application that processes messy, unstructured invoices and converts them into validated, ready-to-use data exportable in **Excel, JSON and PDF** for direct upload into accounting software such as **Tally and Zoho Khata Book**, using **Google Document AI, OCR, canonical schema modeling and automated financial validation** – achieving **94.3% OCR accuracy, 91.2% field-extraction F1-score and 88.5% automated validation**, reducing manual review to **11.5%**.
- Automated the end-to-end pipeline with auto email-based invoice fetching and a pre-validation scoring system that flags errors such as blank fields and mismatched totals through automated summation checks. Built on a **relational SQLite data model** with a **React.js, Tailwind CSS, Python/FastAPI** stack.

PDF-based RAG (Retrieval-Augmented Generation) Q&A System

Personal Project | In Progress

- Building a locally-hosted **RAG pipeline** that lets users upload unstructured PDFs and ask natural-language questions grounded strictly in document content, covering the full stack – **PDF ingestion (PyMuPDF), text chunking, embedding generation (Sentence Transformers), vector storage and semantic retrieval (ChromaDB)**, and local LLM-based answer generation (**Qwen3 via Ollama**).
- Implemented a document-grounded prompting strategy that restricts the LLM to retrieved context and explicitly flags when an answer is not present in the source PDFs, with **source and page-level citations** for generated answers to reduce hallucination.
- Currently extending the MVP with **multi-PDF ingestion, improved semantic chunking, retrieval/answer evaluation, and a Streamlit-based chat interface**, with a public GitHub release and documentation planned next.

HR Operations & Recruitment Platform

Salesforce Sales Cloud

- Built an HR and recruitment management application enabling HR teams to **schedule interviews, manage candidate information, and track internal company activities** through custom objects and employee-focused page layouts.
- Designed **dashboards, automated reminders and expense reports**, along with validation rules and role-based access controls, to maintain secure, consistent HR data and provide leadership with real-time visibility into recruitment and employee operations.

Publication

Vendor-Agnostic Invoice Processing Framework Integrating OCR, Canonical Modeling, and Human-in-the-Loop Validation IJCA, 2026

Co-authored a research paper formalizing the invoice-processing framework built as part of **Parchify**, which I led as team lead – covering OCR-based text extraction, canonical data modeling for cross-vendor invoice formats, automated financial validation logic, and a human-in-the-loop review workflow for low-confidence fields.

Skills

AI & Automation:	Machine Learning, OCR, Google Document AI, Generative AI, Retrieval-Augmented Generation (RAG), LangChain, Sentence Transformers, Vector Databases (ChromaDB), Semantic Search, Local LLM Deployment (Ollama)
Programming:	Python, Java, JavaScript, SQL
Web Development:	React.js, HTML5, Bootstrap, Tailwind CSS, FastAPI, Streamlit
Salesforce:	Salesforce Administration, Apex, Lightning Components, Flows, Process Builder, Reports & Dashboards
ServiceNow:	ServiceNow Fundamentals, ITSM Basics, Glide API (exposure)
Data & Analytics:	Pandas, NumPy, Matplotlib, OpenPyXL, Tableau, Data Validation, Business Reporting

Certifications

- **Microsoft Azure Fundamentals (AZ-900)** – Score: 985/1000
- **The AI Engineer Course 2026: Complete AI Engineer Bootcamp** – Udemy, 2026
